

Dear Hiring Manager,

I am writing to apply for the position of Senior Backend Engineer (Fintech Platform) at your company. With over 5 years of experience in backend development and fintech systems, I am confident that my skills and background make me a strong candidate for this role.

My background aligns with the requirements of this position through my work on high-load distributed systems in the financial domain, including Digital Currency (CBDC) and Fast Payment Systems. I am currently pursuing a Master's degree in Computer Science, which further strengthens my theoretical and practical understanding of scalable architectures and modern backend technologies.

I have demonstrated ability to design and implement microservices using Java and Kotlin, as well as to build reliable event-driven systems with Apache Kafka. In my current role, I developed and delivered approximately 40% of the core functionality of a Digital Ruble platform, including cross-border payment features and secure integrations with national authentication systems. A key accomplishment I am particularly proud of is the development of services for QR payments and terminal integration, which contributed to real-world production deployment.

I am eager to contribute to your team by building scalable and fault-tolerant systems, as well as sharing my experience in system design and mentoring. I also have a proven track record in delivering complex features under tight deadlines while maintaining high quality standards and system reliability.

Enclosed is my CV for your review. I would welcome the opportunity to discuss how my experience and skills can contribute to your team.

I look forward to hearing from you at your earliest convenience.

Sincerely,
T. Artem
